

Bullseye Customer Sprint (BCS) alignment audit

This is the 1st activity, the exact exercise we do to kick off every Sprint because aligned context is half the work

We're mapping what your team knows, doesn't know, and surfacing debates about your customers — things they say out loud or just to themselves. This isn't about having perfect answers. It's about surfacing the edges of your team's thinking before we recruit and interview.

THE EXERCISE (60 min)

-

Round 1: Individual brainstorm (15 min)

Start by working alone, put a single thought per sticky note.

- What question about your product keeps coming back without a clean answer?
- What has to be true in six mos to know this was the right bet?
- Describe the last time one of your customers surprised you.
- What have you assumed about this customer that you've never confirmed?
- What has this customer stopped complaining about — but is still a real problem for them?
- How are they solving this today, before your product is part of their life?

Work fast, no filtering. Sometimes we send a Google form as pre-work.

Note: With all of the steps in this audit, you can use the Miro board version that you received with this PDF or sit together with your team and use sticky notes. There's a worksheet on the next page, if that works better for you.

Bullseye Customer Sprint (BCS) alignment audit

Round 1: Individual brainstorm (15 min)

Starting concerns

THE EXERCISE (60 min) *cont.*

-

Round 2: Share out (20 min)

Share out what you wrote. Notice patterns. Cluster/group similar concerns. Refine any concerns to sharpen the underlying worry.

Round 3: Translate (10 min)

Take those concerns and turn them into actual questions.

- Starting concern example: “People won’t switch if there’s a learning curve, even if we’re cheaper”
- Starting question example: “How much time and effort are customers willing to invest to save 20% on cost?”

Worksheet follows.

Refined concerns

THE EXERCISE (60 min) *cont.*

-

Round 4: Refine the questions (10 min)

Spend a few minutes refining the group of compiled questions. You can do this alone or together — whichever feels right for your team. Polish for clarity, not perfection.

Round 5: Prioritize (5 min)

Now, rank your refined questions:

- Which are most critical to answer before recruiting?
- Which will change your strategy if you learn something new?
- Which ones do you already know the answer to? (Cross those out.)

Key principles:

- Pay attention to disagreement. That's gold.
- If you're certain about something, it's not a question. Go deeper, find the question.
- Remember, polish for clarity, not perfection.

Worksheet follows.

What's next

-

Using the anchor question, you'll develop the customer hypothesis, using one-liner and an 8-part canvas exercise, moving from strategy to validation. Here is the typical sequence that follows:

- *Outreach*: Using the Bullseye Customer hypothesis, find your customers
- *Interview guide*: Turning your critical question into a series of open-ended discovery questions (avoiding the "mom test" traps) while also testing three prototypes
- *Synthesis*: After 5–10 interviews, look for patterns to see if the original hypothesis was confirmed or if you need to pivot

When you're ready to test those questions with real customers, let's talk.
